By Reg Allenby. Because the foundation of equations (and accordingly problem-solving), linear algebra is the main extensively taught.

Once you take pass into modular arithmetic, you're stuck there: $C \pmod 7$ has values in the integers mod 7, not in the integers themselves. But modulo 7, $(2 \ 11 \ 3)$.

Because it is common to consider several congruence relations for different moduli at the same time, the modulus is incorporated in the notation. Determinants and explicit methods for their calculation row and column expansion.
