In spite of this, the inclusion of an instrument like MDQ for screening bipolarity in the daily clinical practice might be very useful in the assessment of patients with a major depressive episode. In the brain, VMAT2 proteins are located on synaptic vesicles.

WantmoreinformationaboutBibleGatewayPlus?ClinPractEpidemiolMentHe Mood switch in bipolar depression: This study confirms that MDQ is a useful instrument in the daily clinical assessment of depressive patients. In this sense, clinicians will ultimately improve the usefulness of screening instruments through their expertise in recognizing present and past manifestations of bipolarity[23].
