In particular, recent attention has helped redefine atherosclerosis as an inflammatory disease. Flos carthami has been shown to be effective against oxidative stress and further study of oxidative stress and weight loss using safflower is warranted. However, it is likely that until relatively recently very few humans had no helminth exposure whatsoever.

The third part of the book details effective and counterproductive aspects of defective leptin signalling is the leading biological basis for obesity. Parasitic nematode-induced modulation of body weight and associated metabolic dysfunction in mouse models of obesity. Whether it is the absence of helminths alone, or more likely, in combination with standard metabolic risk factors like smoking, sedentary lifestyle and hyper-caloric diet that has the largest effect on CAD and T2DM progression remains to be determined.

To verify if strawberry intake can lead to improvements in select measures of adipose tissue and body weight: To date, the cardio-protective role of infection against CAD or T2DM has not been seriously considered with rigorous studies.
